Compression spring calculation excel sheet

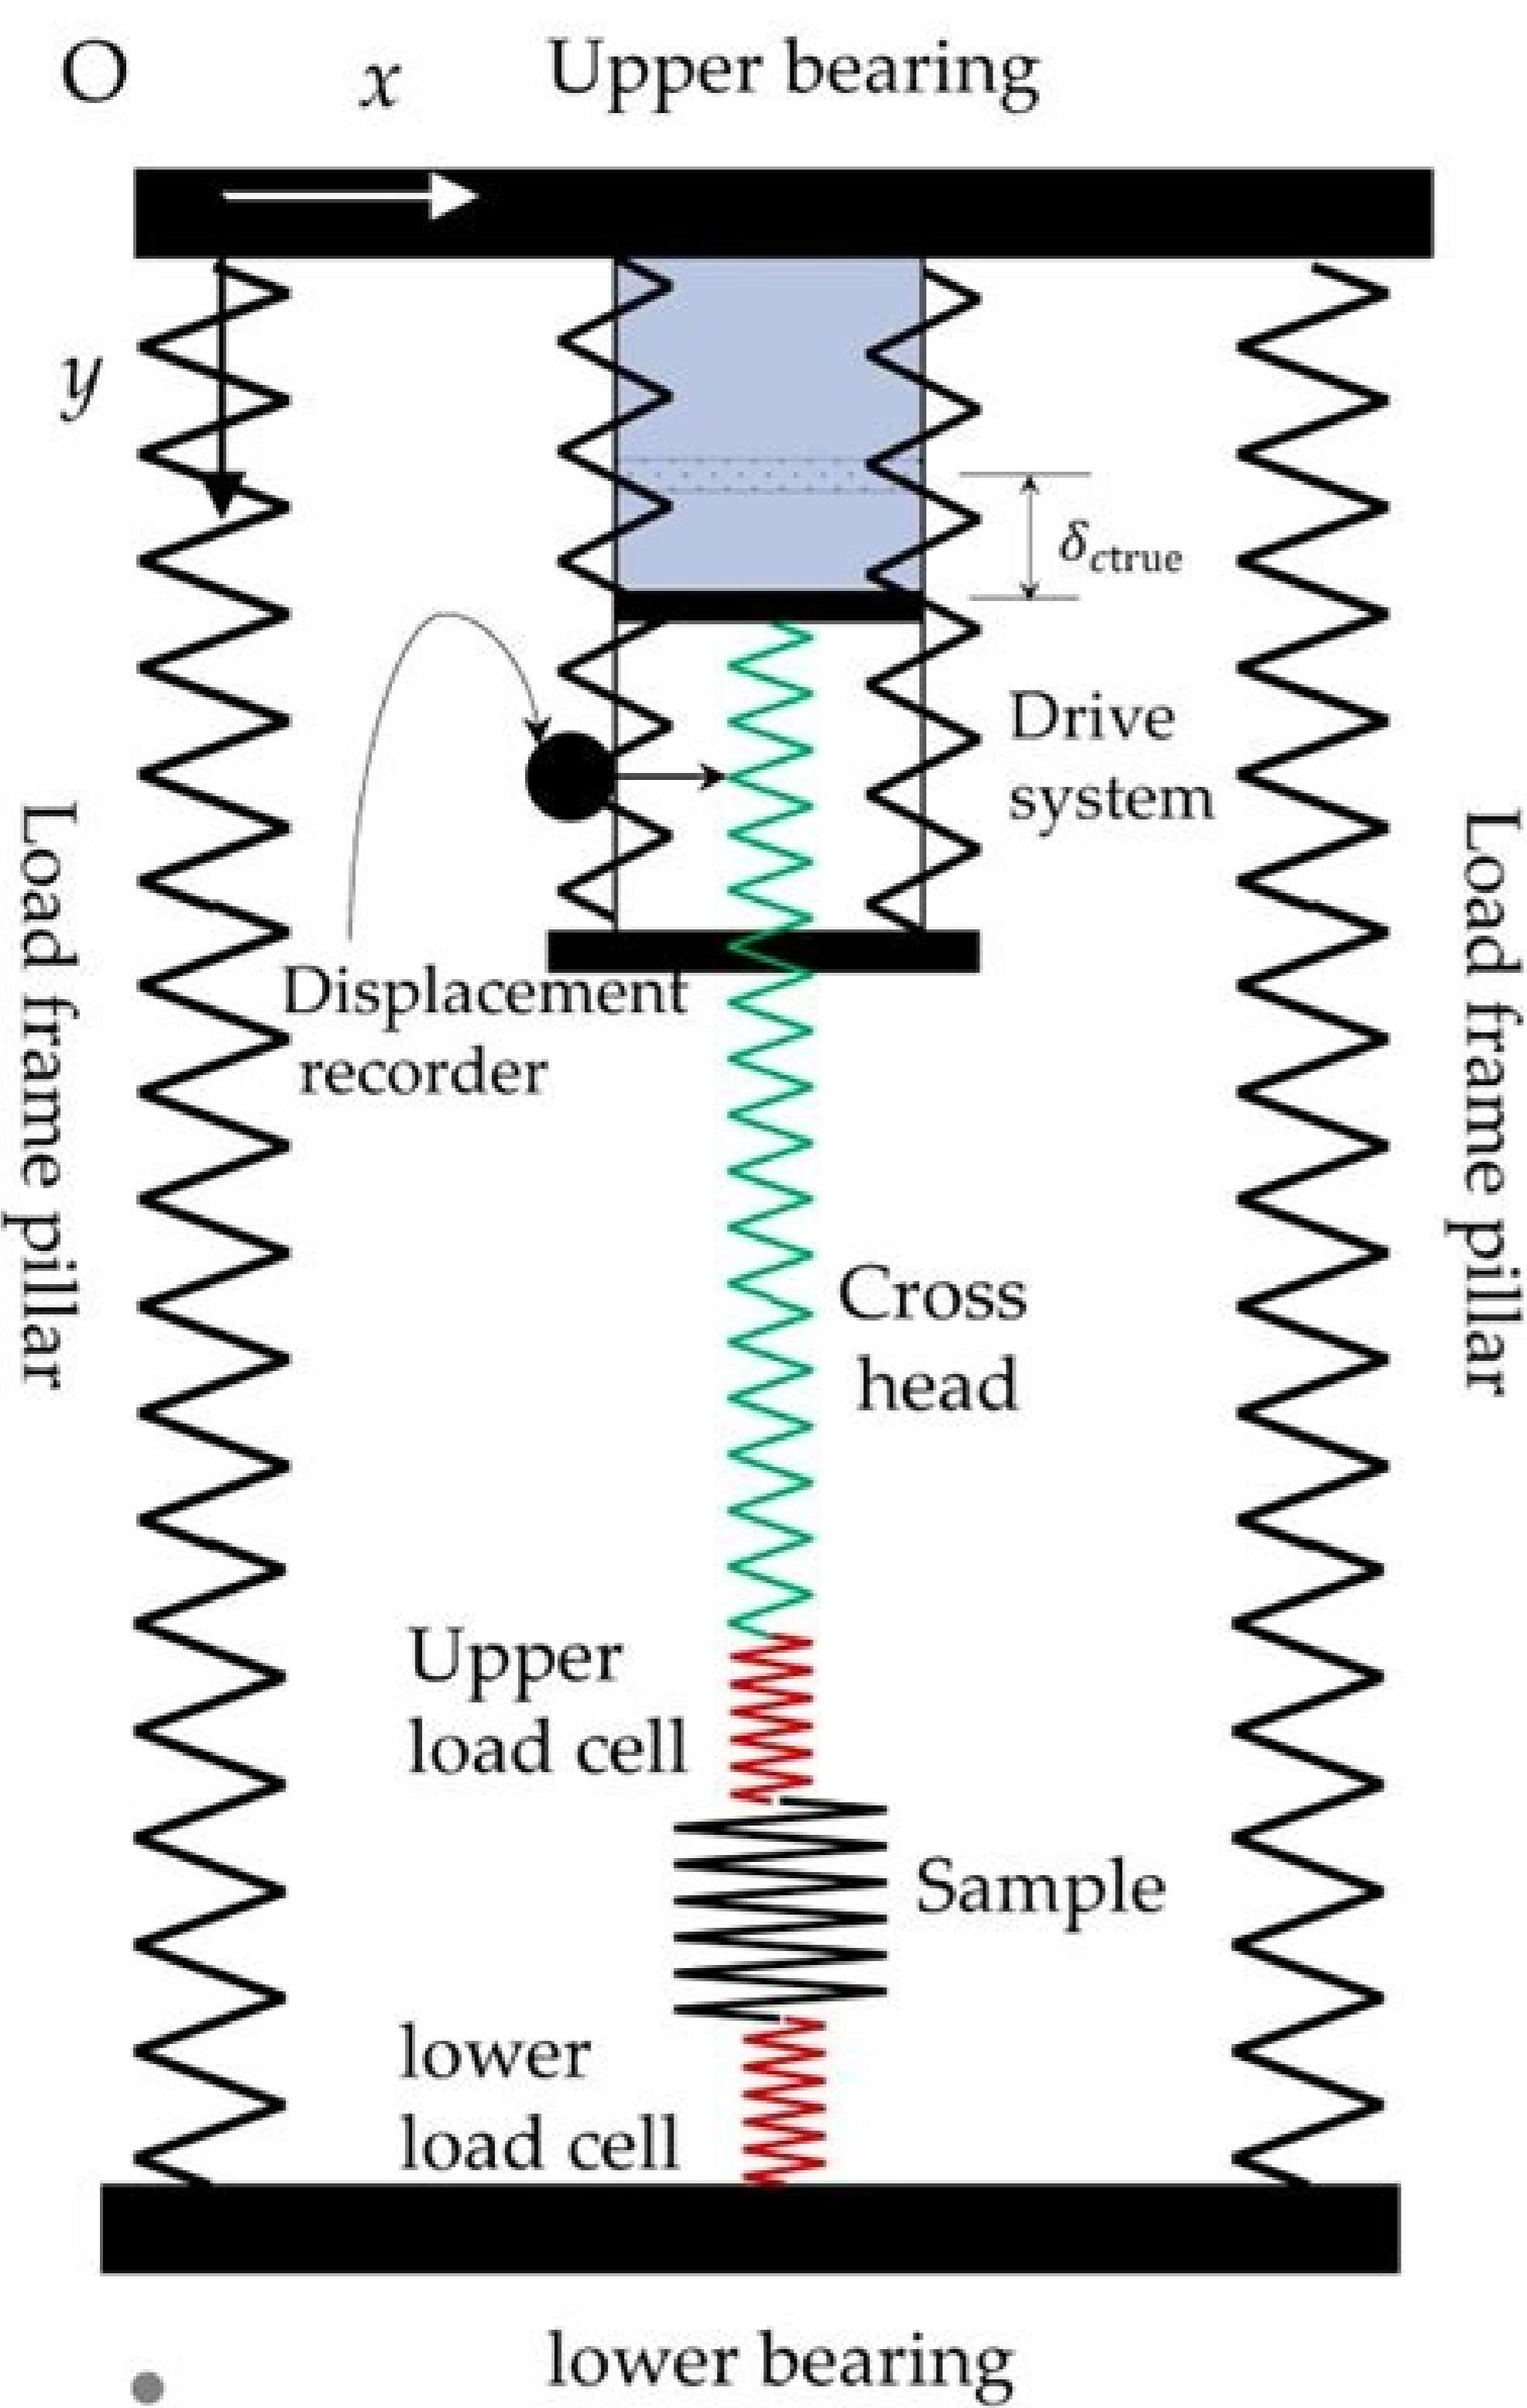

Q1 Quality-One
www.quality-one.com

Likelihood of Failure	Criteria: Occurrence of Cause - DFMEA (Design life/reliability of item/vehicle)	Criteria: Occurrence of Cause - PFMEA (Incidents per items/vehicles)	Rank
Very High	New technology/new design with no history.	≥ 100 per thousand ≥ 1 in 10	10
High	Failure is inevitable with new design, new application, or change in duty cycle/operating conditions.	50 per thousand 1 in 20	9
	Failure is likely with new design, new application, or change in duty cycle/operating conditions.	20 per thousand 1 in 50	8
	Failure is uncertain with new design, new application, or change in duty/operating conditions.	10 per thousand 1 in 100	7
Moderate	Frequent failures associated with similar designs or in design simulation and testing.	.2 per thousand 1 in 500	6
	Occasional failures associated with similar designs or in design simulation and testing.	.5 per thousand 1 in 2,000	5
	Isolated failures associated with similar design or in design simulation and testing.	.1 per thousand 1 in 10,000	4
Low	Only isolated failures associated with almost identical design or in design simulation and testing.	.01 per thousand 1 in 100,000	3
	No observed failures associated with almost identical design or in design simulation and testing.	.001 per thousand 1 in 1,000,000	2
Very Low	Failure is eliminated through preventative control.	Failure is eliminated through preventative control.	1

Q1 Quality-One
www.quality-one.com

Effect	Criteria:		Effect	Criteria:	
	Severity of Effect on Product (Customer Effect)	Rank		Severity of Effect on Product (Manufacturing/Assembly Effect)	Rank
Failure to Meet Safety and/or Regulatory requirements	Potential failure mode affects safe vehicle operation and/or involves noncompliance with government regulation without warning.	10	Failure to Meet Safety and/or Regulatory requirements	May endanger operator (machine or assembly) without warning.	
	Potential failure mode affects safe vehicle operation and/or involves noncompliance with government regulation with warning.	9		May endanger operator (machine or assembly) with warning.	
Loss or Degradation of Primary Function	Loss of primary function (vehicle inoperable, does not affect safe vehicle operation)	8	Major Disruption	100% of product may have to be scrapped. Line shutdown or stop ship.	
	Degradation of primary function (vehicle operable, but at reduced level of performance)	7		A portion of the production run may have to be scrapped. Deviation from primary process including decreased line speed or added manpower.	
Loss or Degradation of Secondary Function	Loss of secondary function (vehicle operable, but comfort/convenience functions inoperable)	6	Moderate Disruption	100% of production run may have to be reworked off line and accepted.	
	Degradation of secondary function (vehicle operable, but comfort/convenience functions at reduced level of performance)	5		A portion of the production run may have to be reworked off line and accepted.	
Annoyance	Appearance or Audible Noise, vehicle operable, item does not conform and noticed by most customers (>75%)	4	Moderate Disruption	100% of production run may have to be reworked in station before it is processed.	
	Appearance or Audible Noise, vehicle operable, item does not conform and noticed by many customers (50%)	3		A portion of the production run may have to be reworked in station before it is processed.	
	Appearance or Audible Noise, vehicle operable, item does not conform and noticed by discriminating customers (<25%)	2		Minor Disruption	Slight inconvenience to process, operation or operator.
No Effect	No discernible effect	1	No effect	No discernible effect

Spring compression rate.

In the formula, E is the module of the young man, G is the transverse elastic module and D is the average diameter of the coil. PLICULO FROM PLIMULATE FOR THE SPRING VIBRACING OF COMPRESSION Springs The compression spring has its own frequency when a spring is subject to a load, deformed or a force is applied and a C
